

Rapoarte pentru Visual Studio 2017, 2019, Community sau Professional

- Meniu -> Extensions -> Manage Extensions

- In bara de cautare scrieti "Report" si descarcati "Microsoft RDLC Report Designer"

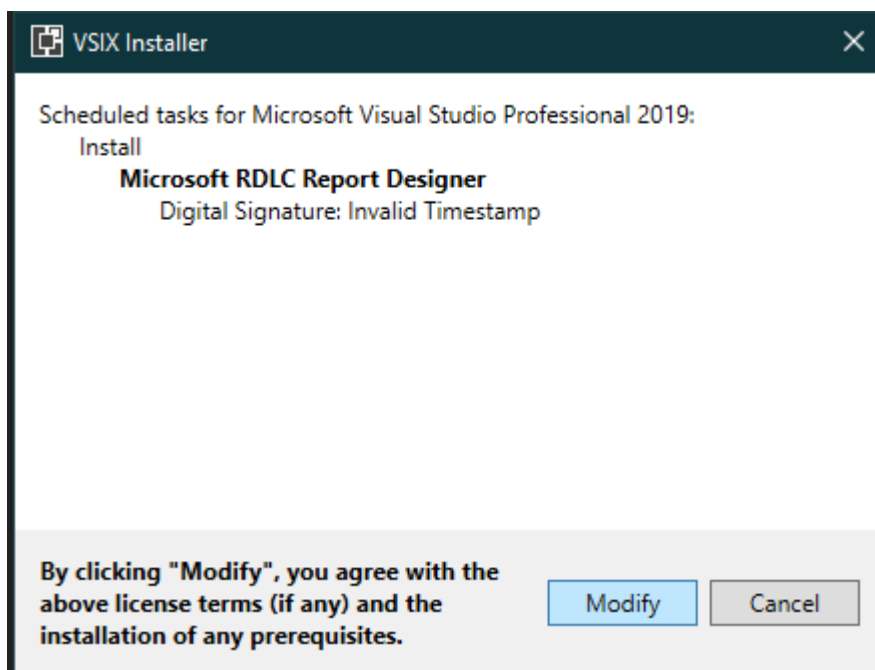

- Inchideti VS

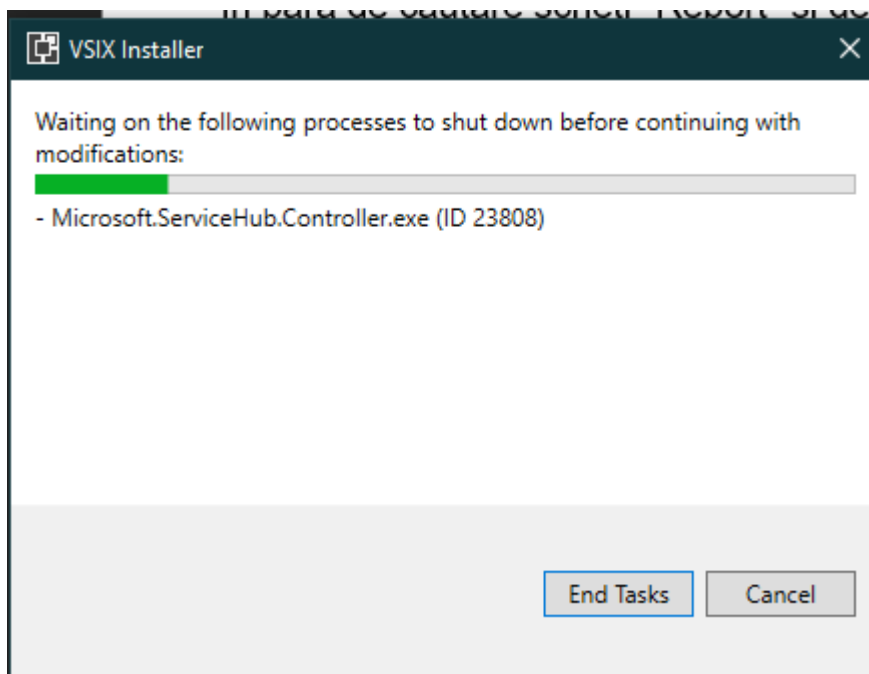

- Deschideti VS

- Daca nu aparut o fereastra "VSIX Installer" atunci intrati intr-un proiect

- Acceptati modificarile si asteptati ca extensia sa se instaleze

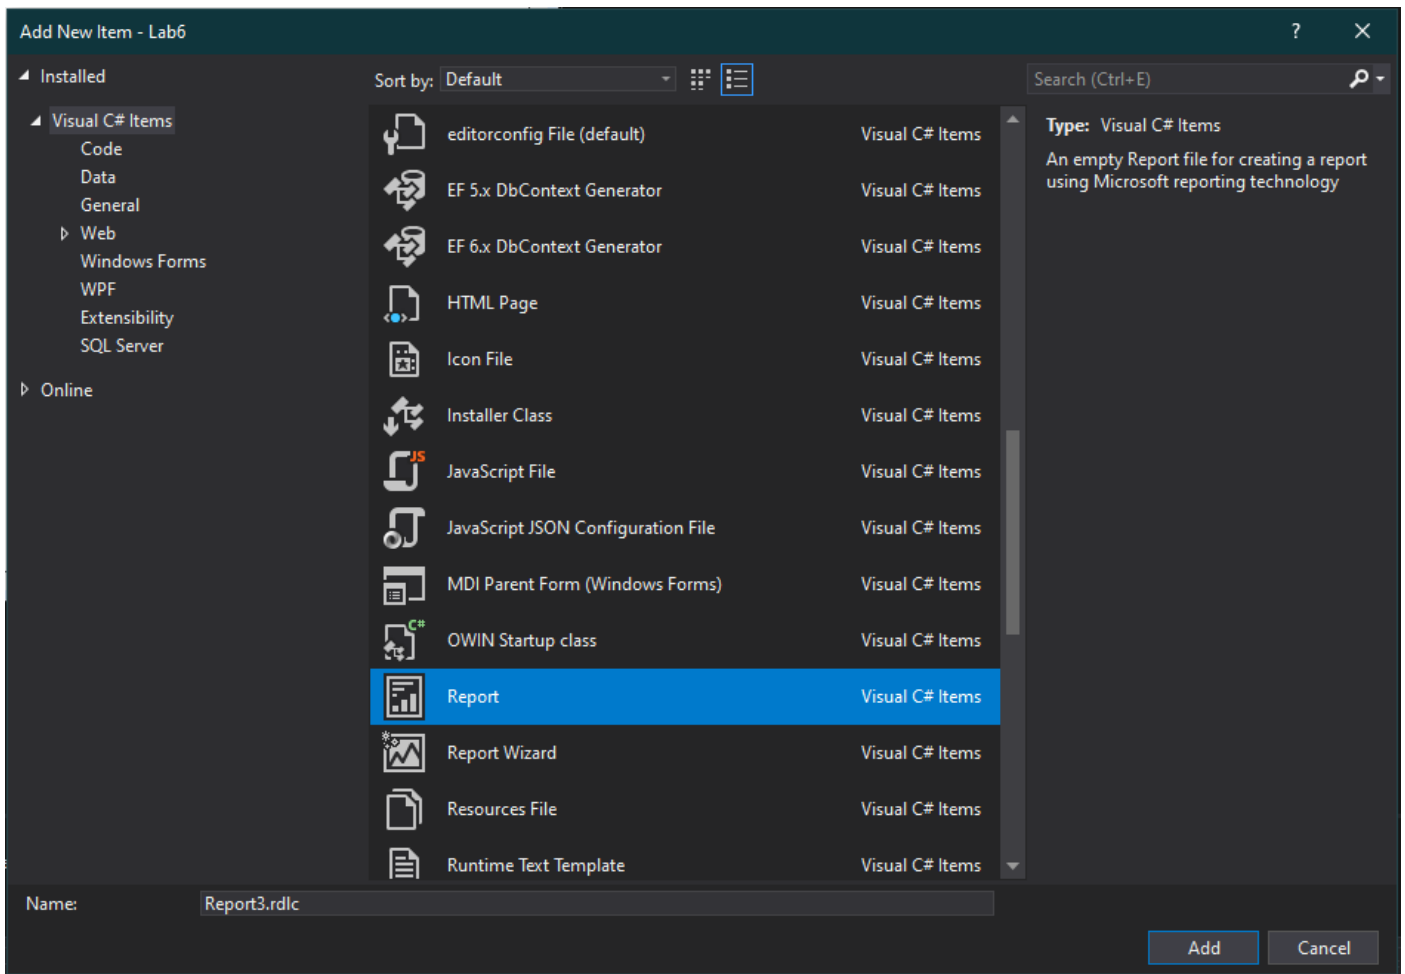

- Dupa apasarea butonului "Modify" inchideti VS
- O sa dureze ceva pana se instaleaza in functie de cate de bun e sistemul vostru, SSD sau HDD
- Daca dupa 1-2 minute inca zice ca trebuie sa niste sarcini sa se inchida atunci foratile sa se inchida (End Tasks)

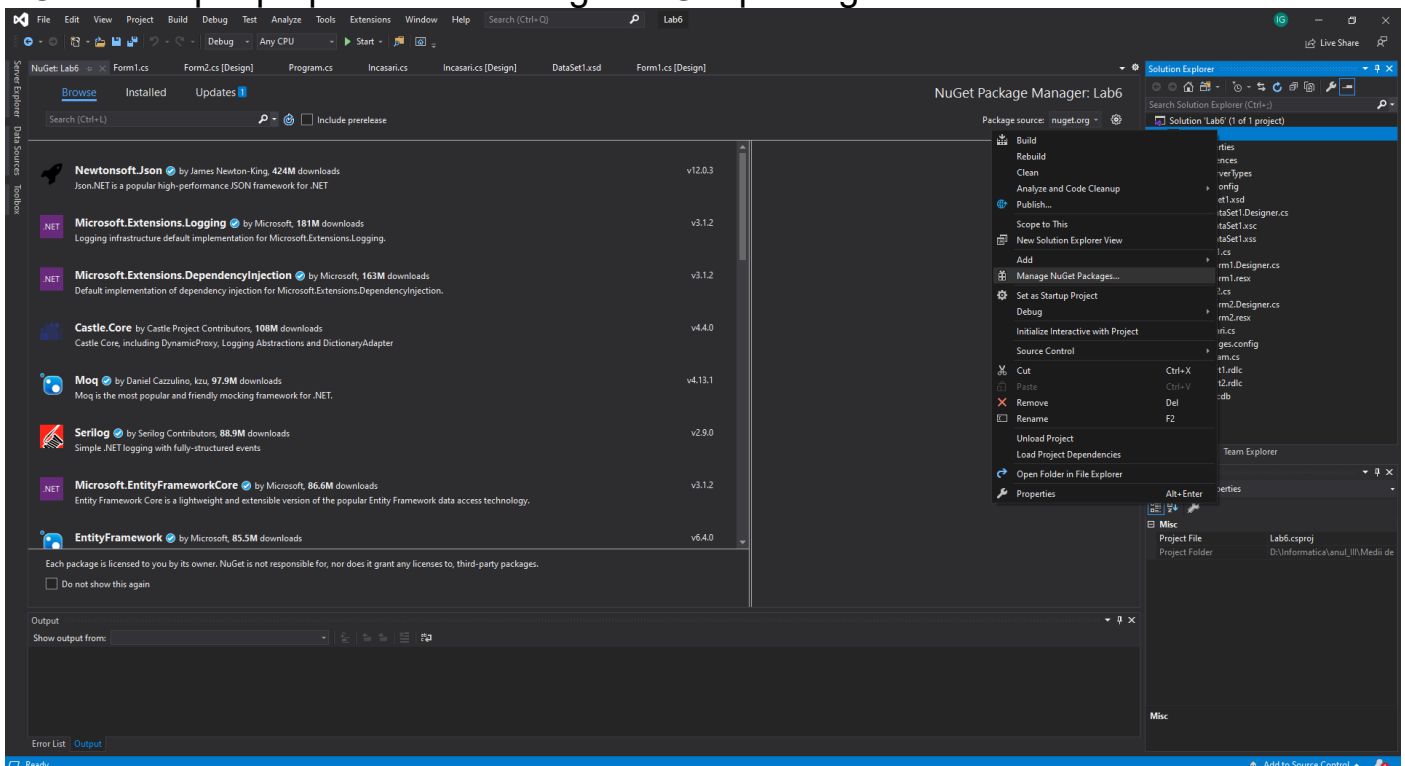

- Intrati in VS

- Acum puteti sa creati rapoarte (Add -> New Item -> Report)

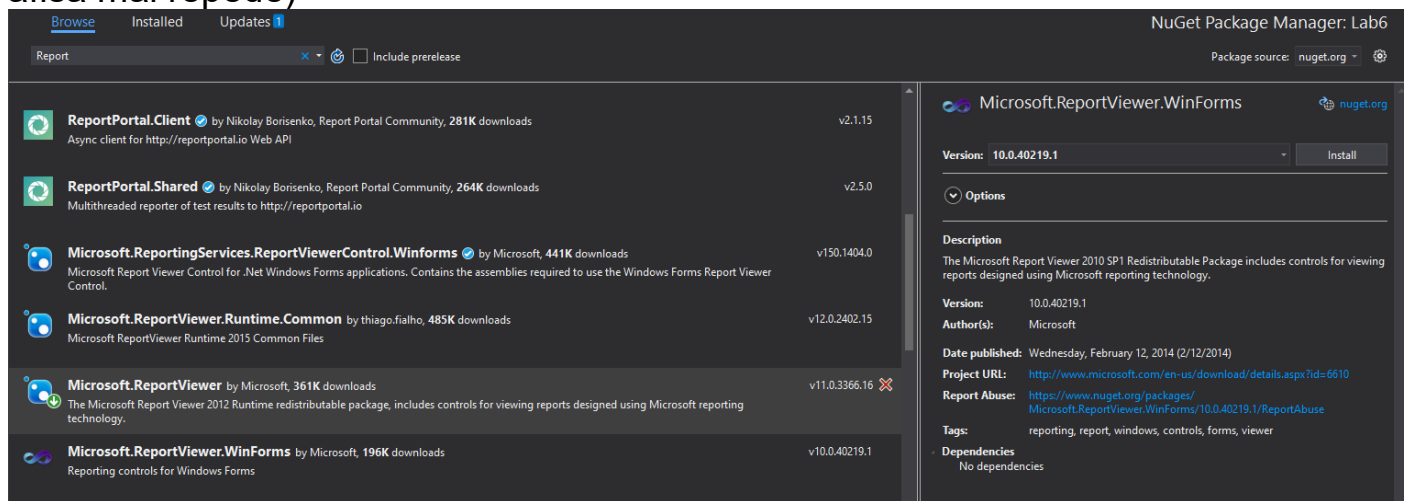

- Pentru ca putea adauga rapoartele in form-uri trebuie sa instalati urmatoarele pachete din NuGet

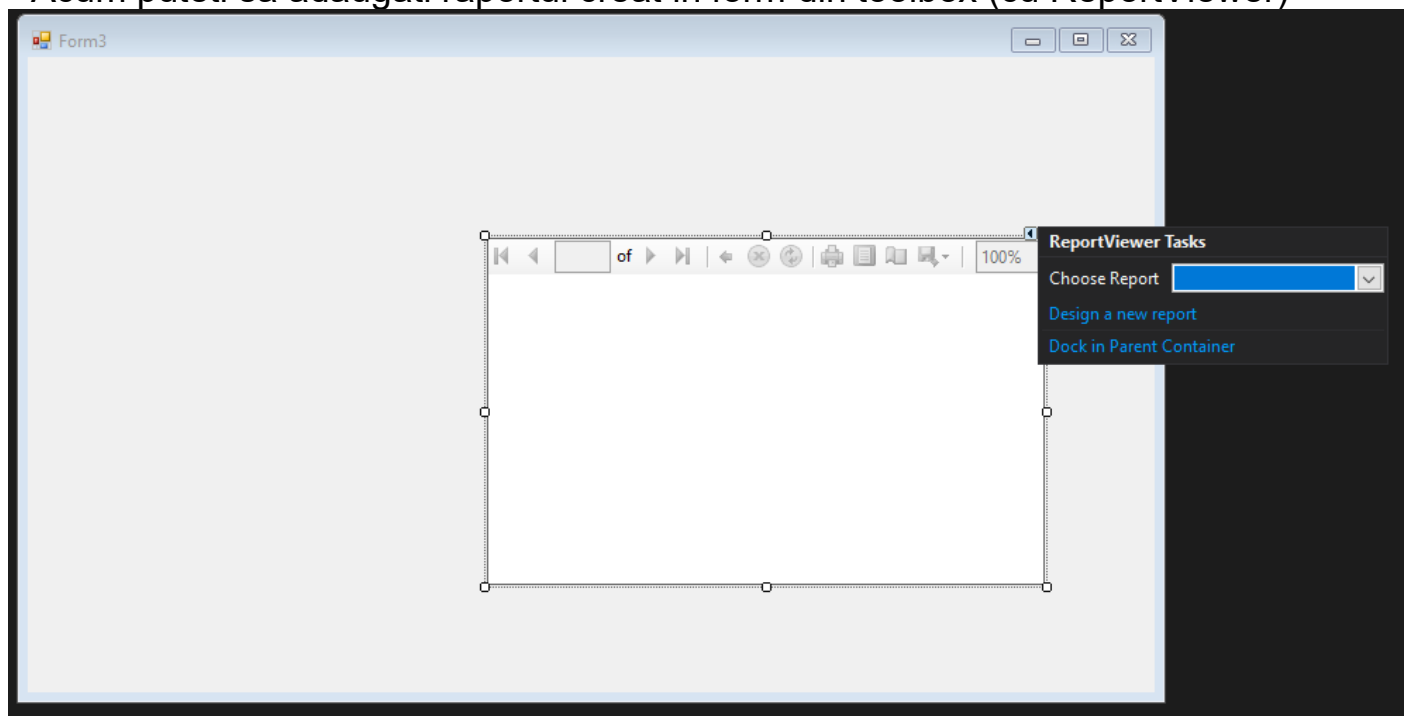

- Click dreapta pe proiect -> Manage NuGet packages -> Tab Browser

- Cautati "Microsoft.ReportViewer.WinForms" apoi install (ca referinta, libraria are 196k descarcari)
- Cautati "Microsoft "Microsoft.ReportViewer" apoi install (361k descarcari) (deasemena se poate scrie numele intreg al librerie in bara de cautare pentru ca le afisa mai repede)

- Dati rebuild la proiect, asa ReportViewer o sa apara in toolbox
- Acum puteti sa adaugati raportul creat in form din toolbox (cu ReportViewer)

- Motivul pentru care instalati 2 pachete de ReportViewer este ca unul contine codul si altul merge in forms, cel care contine codul aparent e buguit in forms si nu apare.
- Daca vedeti 2 elemente ReportViewer in toolbox doar unul merge, celalalt ori nu apare nimic in form ori primit o eroare.
